I'm a self employed cross country truck driver and if it wasn't for my satellite radio that I have in my truck I wouldn't know what the wheather or traffic is in the different states that I travel through. It literally saves my life. As you know us truck drivers have dead lines to be at the delivery sites and if it wasn't for the instant traffic updates and the wheather reports we wouldn't be able to deliver our products on time, not to say the most important issue is the safety of knowing when to take alternate routes from traffic accidents. I'm paying for these services and I respectfully urge that the FCC reject the National Association of Broadcaster's petition 04-160 and support xm's ability to provide the kind of programming us citizens demand and deserve.
